DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14 and 52-64, drawn to a four piece, three axis spin stand, classified in class 324, subclass 262.
- II. Claims 15-51, drawn to a spin stand with a vacuum pre-loaded air bearing and with an associated means for removing air, classified in class 360, subclass 220.

The inventions are distinct, each from the other because of the following reasons:

Inventions in Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention in Group I has separate utility as being usable as a four piece three-axis spin stand while the invention in Group II has a separate utility being usable as spin stand having a vacuum pre-loaded air bearing, either of which can be used in apparatus not

requiring these specific features of the other group. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Attorneys Toby Kusmer (Reg. 26,418) and Mark Lappin (Reg. 26,618) on October 27, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
